

Im Auftrag des:

Cost Calculator for Resource Efficiency

Manuel Weber
VDI Zentrum Ressourceneffizienz GmbH

PRESOURCE Workshop Bologna, 18.09.2014

Im Auftrag des:

VDI Centre for Resource Efficiency

- Project cooperation of VDI and BMUB, financed by the National Climate Fund
- Focus on resource efficiency in companies
- Competence Centre to utilise existing technical RE know-how for SME
- Development of standards through VDI guidelines for RE in cooperation with VDI

VDI ZRE Support Tools

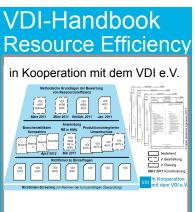

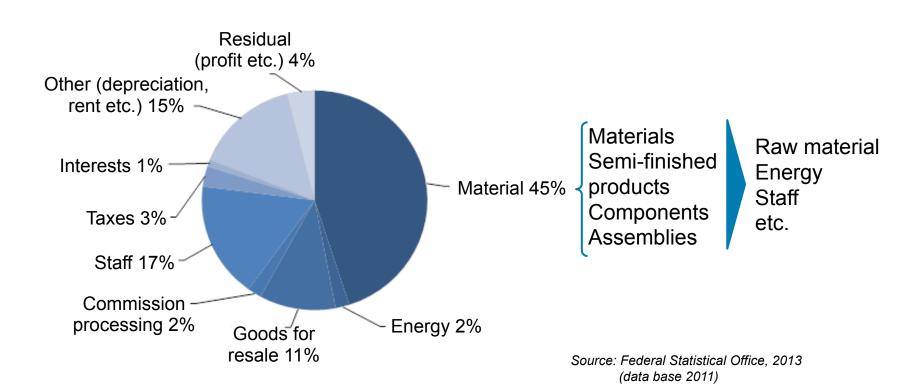

Cost Structure Processing Trade

Material is the largest part

Cost Calculator

- Practical introduction to the resource-based costing
- 3 modules for cost analysis in SMEs
 - Cost structure calculator with analysis of the cost structure and comparison with industry values
 - Material Flow Cost calculator for material and energy flows within the company and calculation of material flow costs (acc. ISO 14051)
 - Investment calculator including life cycle costs
- English version is planned

www.kostenrechner.ressource-deutschland.de

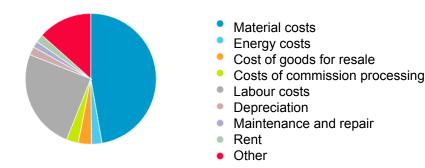

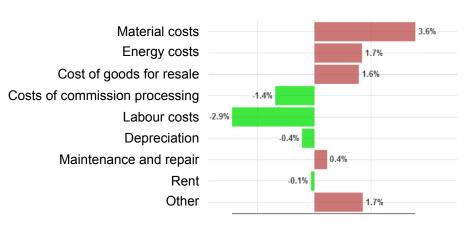

Cost Calculator

Cost structure Calculator

- Presentation of operating cost structure based on annual data
- Bench marking to the corresponding industry and company size according to the Federal Statistical Office
- Deviations from the industry average are illustrated

Cost Calculator

Material Flow Cost Accounting (MFCA)

Source: according to ISO 14051

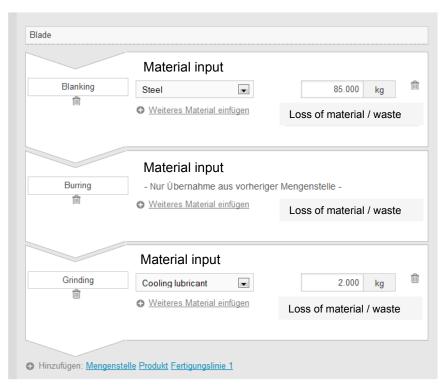

Cost Calculator

Analysing the production process

- Material composition of products
- Material consumption
- Defining separate quantity centres
 - Input of materials
 - Planned loss of material
 - Waste
- Allocating costs to quantity centres
 - Energy costs
 - System costs
 - Waste management costs

Source: VDI ZRE GmbH

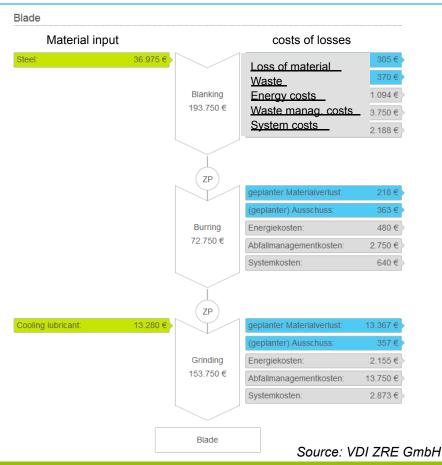

Cost Calculator

Results

- Clear presentation of material costs and costs of losses within the quantity centres
- Identification of abnormal costs of losses in processes
- Detection of efficiency potentials
- Verification of the production costs and costs for semi-finished products

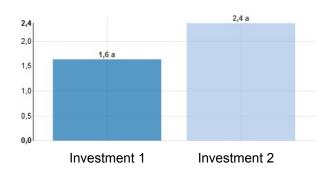

Cost Calculator

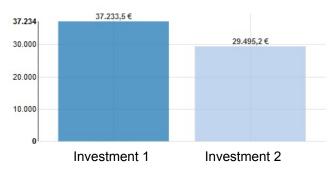

Investment Calculator

- Input boxes are based on life cycle costs according to VDMA standard sheet 34160
 - Preparatory phase
 - Operation phase
 - Further utilization phase
- Comparison of payback periods and capital values
- Support for investment decision for resource efficient technologies

Payback period (years)

Capital values (€)
