

The EU-project PRESOURCE has developed an Online Competence Platform for Central Europe to provide free of charge and easy access to a broad range of relevant information on resource efficiency.

PRESOURCE is funded by the European Union's CENTRAL EUROPE Programme and aims at increasing resource efficiency, especially in small- and medium-sized enterprises (SMEs) in Central European countries by identifying opportunities for improving and financing investments in eco-innovation.

PRESOURCE's Competence Platform includes:

- Institutional and other relevant actors and their activities (funding, publications, consulting services)
- A calendar with relevant events
- A catalogue of publications and documents (studies, policy papers, etc.)
- Technological good practice examples
- Tools helping SMEs to improve their resource efficiency

This information is available for the six PRESOURCE partner countries (Austria, Czech Republic, Germany, Hungary, Italy and Poland) as well as for the EU as a whole (including transnational projects).

The Competence Platform also provides information in English for intermediaries and multipliers (agencies, associations, chambers, etc.) working closely with SMEs in the manufacturing sector. Public actors from different levels (EU, national, regional and municipal) and different departments (e.g. economy, industry, environment, energy, etc.) can also benefit from the Competence Platform and use its content in their daily work. Finally, SMEs can directly use the Competence Platform to obtain tailored information that may help them in their efforts to increase resource efficiency in their production processes.

The Competence Platform will be hosted and regularly updated by Fraunhofer MOEZ after the project's end.
